PROFESSIONAL SUMMARY

Aspiring Data Analyst with hands-on experience in SQL, Python, and data visualization tools including Power BI and Tableau. Proficient in data preprocessing, exploratory data analysis, and developing scalable ETL pipelines to extract meaningful insights from large datasets. Strong ability to design interactive dashboards and communicate data-driven insights to support business decisions. Eager to leverage analytical skills and problem-solving abilities to contribute effectively in a dynamic, data-driven environment.

TECHNICAL SKILLS

Languages & Databases: Python (Pandas, NumPy, Scikit-learn), SQL (PostgreSQL, MySQL), NoSQL

Data Engineering & Quality: ETL Pipelines, Data Validation, Data Quality Assurance (QA), Data Governance, Real-Time Data Ingestion, PySpark

Data Analysis & Science: Exploratory Data Analysis (EDA), Feature Engineering, Predictive Modeling (Classification, Decision Trees, Random Forest)

AI & Automation: LLMs, AI Agents, Prompt Engineering, OCR Automation, Web Scraping, Structured & Unstructured Data Handling

Visualization & BI: Power BI, Tableau, Dashboard Development, KPI Tracking, Stakeholder Reporting

Cloud & Tools: AWS (S3, EC2), GitHub, VS Code, FastAPI, Advanced Excel (Power Query, Pivot Tables)

PROJECTS

Real-Time Online Voting System Analytics | *Python, FastAPI, PostgreSQL, PySpark, Power BI* 2026

- Designed real-time data ingestion APIs using FastAPI to capture and store vote events, enabling continuous data availability for analysis.
- Built PySpark-based ETL pipelines incorporating data validation, deduplication logic, and one vote per user to improving data integrity across the dataset.
- Created structured analytics tables and Power BI dashboards supporting near real-time vote counting and region-wise trend analysis for stakeholders.

AutoPO – Automated Purchase Order Processing System | *Python, OCR, PostgreSQL, ETL* 2025

- Extracted and processed purchase order data from email attachments using IMAP and OCR automation, reducing manual effort and improving data processing efficiency.
- Built end-to-end ETL pipelines to extract, transform, validate, and load structured PO data into PostgreSQL, ensuring data accuracy and consistency.
- Implemented inventory matching logic and automated reporting workflows, improving order reconciliation and operational efficiency.

Crop Recommendation System – Predictive Analysis | *Python, Machine Learning, Pandas* 2025

- Performed exploratory data analysis (EDA) on soil and climate datasets to identify key features influencing crop yield and suitability.
- Developed and evaluated classification models (Decision Tree, Random Forest) to recommend optimal crops based on input parameters, achieving reliable prediction accuracy.
- Built an interactive web interface for real-time data input and prediction output, enabling practical decision support for end users.

EDUCATION

C-DAC: Centre for Development of Advanced Computing, Mumbai *Feb 2026*
PG Diploma in Big Data Analytics Mumbai, Maharashtra

Dr. Babasaheb Ambedkar Technological University *June 2025*
Bachelor of Engineering – Computer Engineering Jalgaon, Maharashtra

CERTIFICATIONS

- AWS Data Engineering Certification (2025)
- AWS Academy – Cloud Foundations & Generative AI Foundations (2025)
- NPTEL Cloud Computing – IIT Kharagpur (2024)
